JOHN CARLO DIAZ

Software QA Engineer | SDET | SQL & .NET Developer

Antipolo, Rizal, Philippines • +63 965 138 8049 • diaz.181021@gmail.com • linkedin.com/in/john-carlo-diaz-763975248

PROFESSIONAL SUMMARY

Software QA Engineer with 3+ years across test automation, SQL data validation, and full-stack .NET development. Builds end-to-end test suites in Playwright, validates REST/SOAP APIs with Postman, and writes complex T-SQL to prove data integrity across financial and lending systems. Early specialist in AI/LLM output validation — accuracy, consistency, and hallucination testing. Comfortable owning quality in fast-paced, remote, cross-border teams.

SKILLS

Test Automation: Playwright, Selenium, Postman / Newman, REST & SOAP API testing, React Testing Library, TypeScript, JavaScript, CI pipelines (GitHub Actions)

QA & Testing: Test case & test plan design, functional / regression / integration / UAT testing, defect lifecycle & bug reporting, cross-browser & responsive testing, accessibility testing (axe-core), QA documentation, Agile

Databases & SQL: T-SQL, SQL Server (MSSQL), stored procedures, window functions, CASE, JOINs, aggregations, query optimization & performance tuning, data validation & reporting

AI / LLM Validation: LLM output validation, hallucination & accuracy testing, AI behavior testing, prompt engineering (Claude, ChatGPT)

Programming & Web: C#, ASP.NET Core 3.1, .NET Framework, VBA, WinForms, React / Next.js, PL/pgSQL

Tools & Platforms: Git / GitHub, JIRA, Power BI, AWS Lightsail (EC2), Supabase / PostgreSQL, SAP Business One, SAP HANA, Microsoft Office

WORK EXPERIENCE

Automation QA Developer (Independent Contractor) — Dec 2025 – Present

TECHAPP Business SDN BHD / Webist Pro SDN BHD — Selangor, Malaysia (Remote)

- Built and maintained automated end-to-end UI test suites in Playwright (TypeScript), expanding regression coverage across web platforms and catching defects before release — covering 25 critical user flows.
- Built an internal production game-health checker (Playwright + TypeScript) that launches and verifies every provider/game across the live platform, using sharded parallel execution, a circuit breaker, adaptive sampling, and HTML/dashboard reporting.
- Ran functional, regression, integration, and API testing (Postman, REST/SOAP) on credit-application and lending platforms, validating 20 endpoints against backend data.
- Wrote complex T-SQL (JOINs, window functions, CASE, aggregations) to validate data integrity and generate funnel, audit, and business reports, confirming consistency between application behavior, API responses, and the database.
- Authored structured test scenarios, test cases, and scripts; logged, triaged, and verified defects through full retest cycles, reaching a 90% first-pass defect-catch rate.
- Validated AI/LLM outputs for accuracy, consistency, reliability, and hallucinations (Claude, ChatGPT), and used AI-assisted workflows to speed up test-case generation and QA documentation.

Master Data Specialist / Software Developer — Sep 2024 – Dec 2025

Goldilocks Bakeshop Inc. and Brownies Unlimited — Mandaluyong City

- Built internal tools and automation scripts (VBA, C# / ASP.NET) for data processing, validation, and reporting, cutting manual workload by 8 hours per week.
- Developed and maintained in-house WinForms applications and tuned SQL Server queries for faster, more reliable reporting.
- Created Power BI dashboards and data models for Accounting and Marketing, enabling data-driven decisions.

EMR — Medical Doctor Support Staff (Contractual) **Apr 2024 – Aug 2024**

St. Luke's Medical Center — Quezon City

- Provided technical support and maintenance for EMR systems, sustaining 99% system uptime.
- Troubleshot EMR issues for healthcare providers, contributing to a 15% reduction in patient processing time.
- Generated and analyzed EMR reports to support clinical and administrative decisions, maintaining patient-data accuracy and confidentiality under data-privacy standards.

Jr. Software Engineer — ATS (Quality Assurance) **Oct 2023 – Apr 2024**

P.IMES Corp. — General Trias, Cavite

- Designed and deployed a custom Auditing System Portal (ASP.NET Core 3.1, SQL Server), improving internal audit efficiency by 30%.
- Led front-end and back-end development to deliver a robust, user-friendly solution.
- Gathered requirements from cross-functional teams and translated them into functional specifications; provided ongoing support, enhancements, and bug fixes.

Internship — Software Developer (486 Hours) **Apr 2023 – Jul 2023**

Analog Devices Inc. — General Trias, Cavite

- Developed an Automated SYL Calculator (C# / .NET Framework) that replaced a legacy system and reduced calculation errors by 25%.
- Conducted testing, troubleshooting, and debugging, achieving a 95% pass rate on deliverables.
- Documented development processes, user manuals, and technical specifications.

PROJECTS

Balentra – Ledger App — balentra-ledger.vercel.app Personal-finance web app (solo build) | Next.js 15, React 19, TypeScript, Tailwind, Supabase / PostgreSQL, PL/pgSQL

- Built a GitHub Actions CI pipeline that runs typecheck, ~1,500 unit and 265 component tests, a production build, an npm security audit, live-database security/idempotency suites, and Playwright E2E on every push.
- Wrote a full test pyramid: Playwright E2E (responsive sweep across three viewports with console-error capture), React Testing Library component tests, axe-core accessibility checks, and an embedded-Postgres harness for live-DB security tests.
- Engineered data integrity with Postgres Row-Level Security, least-privilege grants, financial invariants, and idempotent batch writes across 30+ SQL migrations.
- Integrated and test-verified a PayMongo hosted-checkout and signed-webhook billing flow plus Plaid bank connectivity; migrated the data layer from Google Sheets to Supabase.

EDUCATION

Bachelor of Science in Information Technology **Aug 2019 – Sep 2023**

STI College — Rosario

- Overall Champion, Code Fest Programming Competition 2022
- Best in Thesis / Capstone Project (Programmer) — Vapers Creed's Electronic Cigarette: Distributor's Inventory, Sales, Ordering and Management System, built in C#

CERTIFICATIONS

SAP Business One — SAP Advance (Implementation and Support) **Sep 2023**
